October 2, 2019 | Project Update No. 21

This letter is being sent to inform you of current and upcoming activities on the above-referenced project.

It was observed during a recent project area review that a number of the turf areas which were seeded and mulched this past spring have varying levels of weeds that have become established. Where needed, the contractor is planning to apply a broadleaf herbicide over some lawns and some public spaces within the next few weeks to knock down the weeds.

With the grass turf past the germination stage, it is not expected that this application of broad-leaf herbicide will harm the grass. Lawn and turf areas will be re-evaluated next spring to see if additional seed will have to be placed.

Because a person's lawn is such a personal item, I write this letter requesting that you contact me if you DO NOT want a broadleaf herbicide applied to your lawn this season. Those who wish to forego the weed spray application or have already applied their own, will have their lawns marked or indicated to the contractor to avoid any application. Also note that once the weed spray is applied, any application of grass seed (over-seeding) should be applied in late-October or early-November as dormant seed or applied next spring.

At this point all work items are complete, however there is a list of some warranty items that may be addressed this fall or next spring.
